

Employee Management System User Manual

1. Installation

To install this application, get the installer from <https://github.com/akito0120/employee-management-system/releases/download/v1.0.0/employee-management-system-1.0.0-setup.exe> and execute it on Windows 11.

Upon initial launch of the application, two default users are created.

- admin@example.com
- user1@example.com

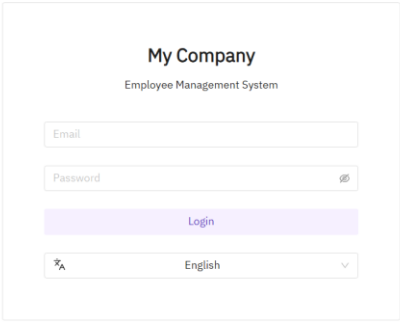

Both users can be logged in with the password “password”. You can change the email and password later.

To add new users to the system, see instructions in **4. User Management** chapter.

2. Login, Logout, User Actions

When you start the application, you will see the login page.

By entering the email address and password, then pressing “Login” button, you can login to the system.

The screenshot shows a login form for 'My Company Employee Management System'. It includes input fields for 'Email' and 'Password', a 'Login' button, and a language selector set to 'English'.

My Company
Employee Management System

Email

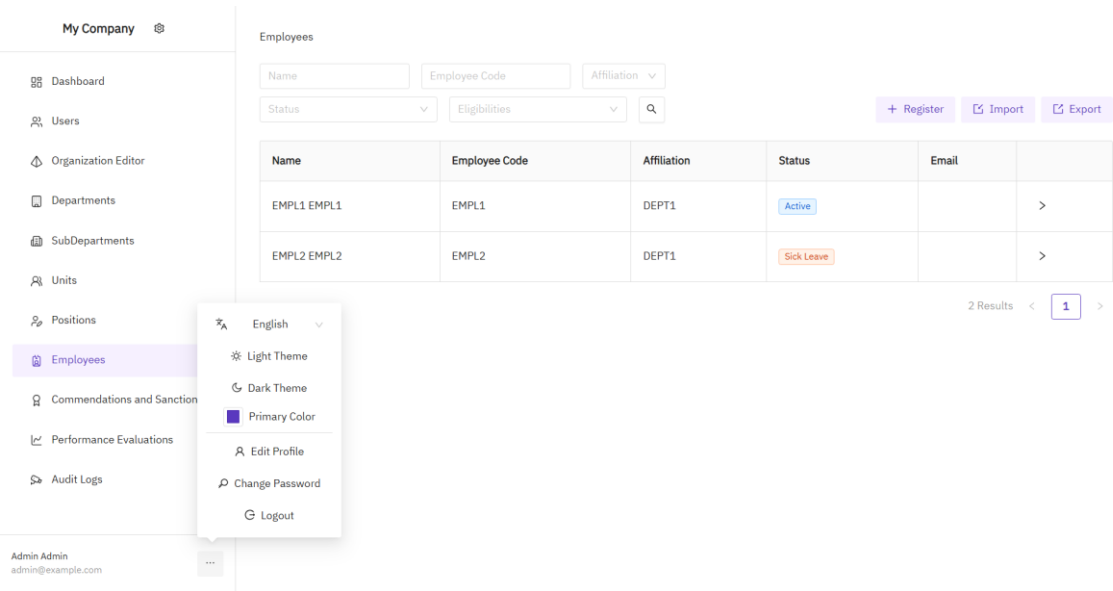

Password

Login

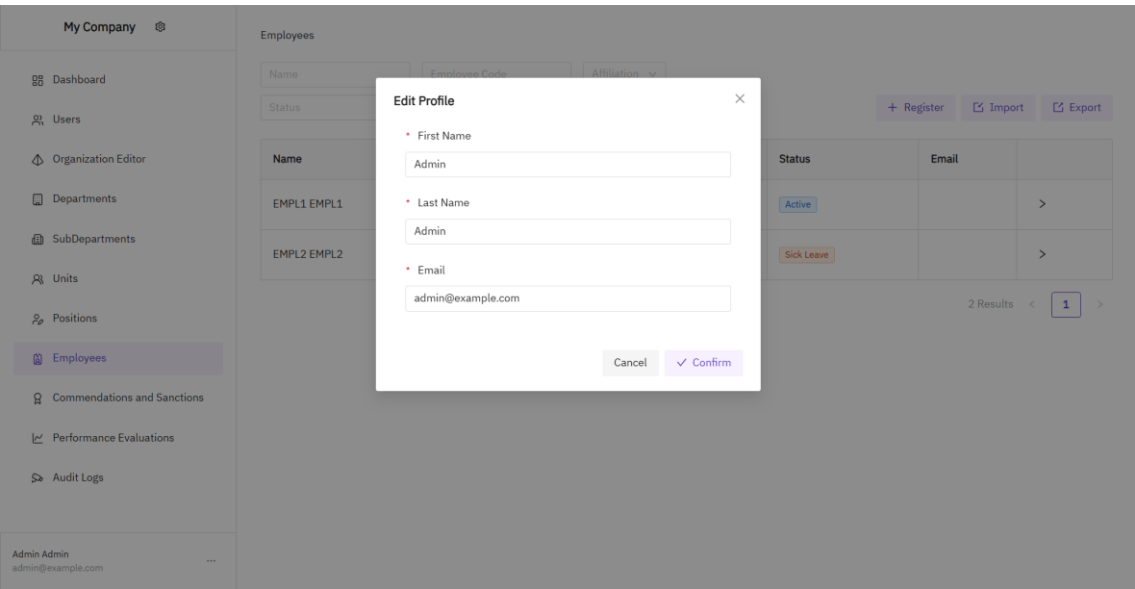

English

You can logout from the system by simply closing the application, or by pressing the ellipsis

button (hereinafter referred to as “user actions”) on the bottom of the sidebar, then the “Logout” button. If you choose to logout with the button, you will be navigated to the login page, where another user can login without closing the application.

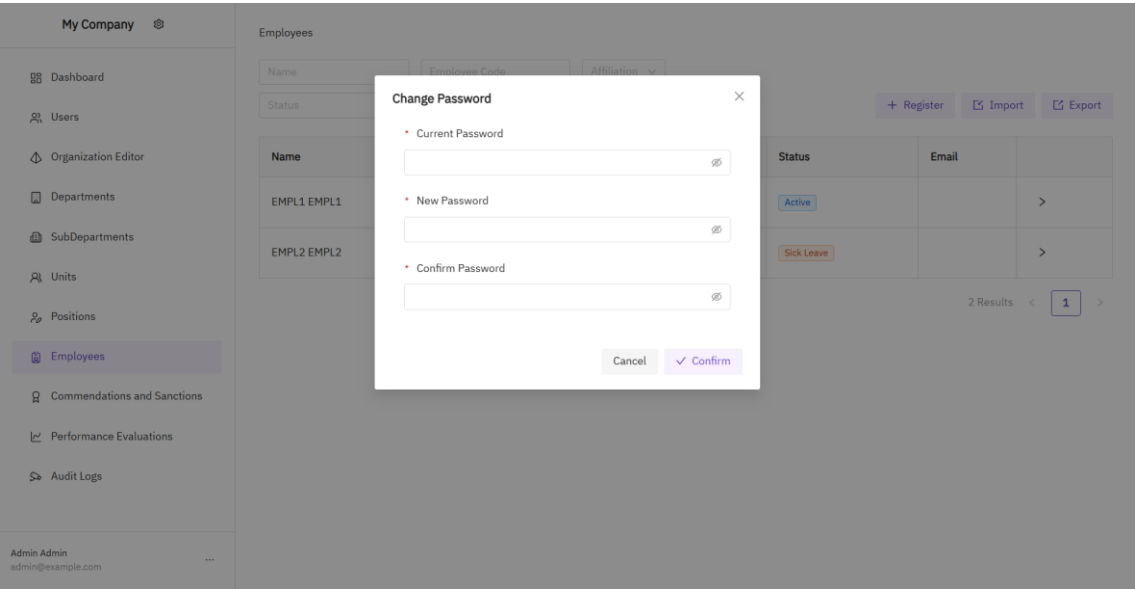

From the user actions, select “Edit Profile” option. A modal will pop up, where you can edit your user profile: email, first name and last name. Press “Confirm” to apply changes.

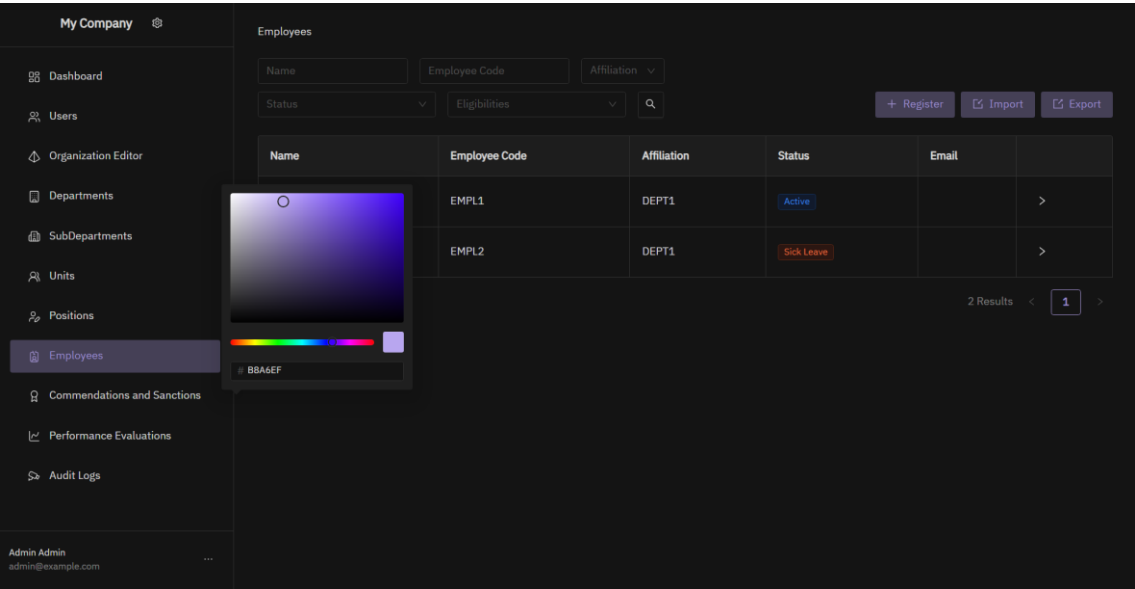

From the user actions, select “Change Password” option. A modal will pop up, where you can change the login password by entering the current password and new password. Please repeat the new password in the “Confirm Password” section to make sure you entered the

new password correctly. Then, press “Confirm” to apply the change. From next login, you will have to use the new password.

You can select the application language with the first option of the user actions (currently selected language is shown).

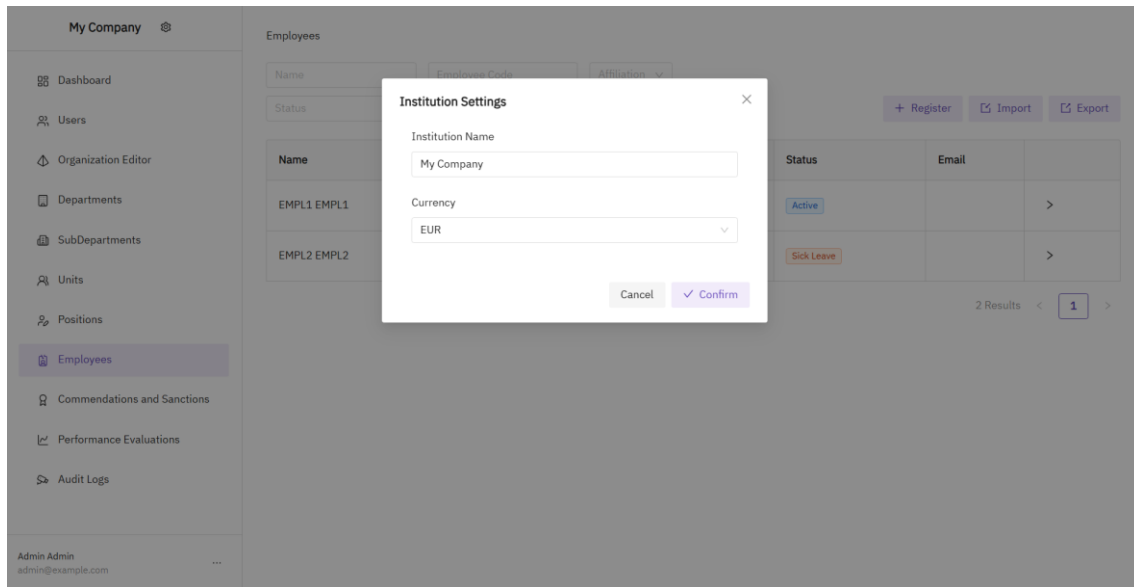

To switch dark/light theme, use the options in the user actions: “Light Theme” and “Dark Theme”. When you switch from one theme to another, you may find the primary theme color of the application a little too dark or too bright. With the “Primary Color” option in the user actions, you can change to appropriate color.

3. Edit Institution Settings

By clicking the gear icon next to the institution name shown on top of the sidebar, you can open the institution setting modal.

Here, you can edit the institution's name and currency used in the application UI. Press "Confirm" to apply changes.

4. User Management

You can open the users page by clicking on "Users" in the sidebar. This option will only be visible for admin users, since only admin users are authorized to manage users.

In the list view, you can search for users with name and administrator access. Enter the search criteria in the search form above the list, then press the search button next to it.

By pressing the delete button in each row of the table, you can delete the user. Keep in mind that the system does not allow us to delete the last admin user and non-admin user.

By pressing the “Add” button on the right top of the list view, you can open the user registration page. Enter required information and password, then press “Confirm” to register new user. Keep in mind that the email has to be unique, since users it is used to uniquely identify the user when logging in to the system.

5. Dashboard

By clicking “Dashboard” in the sidebar, you can open the dashboard page. Here, you can see different statistics of the system, which might be helpful for everyday operation.

You can drag & drop each items to change the layout.

6. Organization Structure Management

In this user manual, only the department management is explained in detail, but the same idea applies to sub-department and unit management.

Click the “Departments” in the sidebar. You will be navigated to the department list page. Here, you can see the list of departments, and search for departments with name, department code and status.

There is a useful feature called “Organization Editor”, which allows you to visualize the hierarchical structure of the organization and add/edit/delete organizational units. Click “Organization Editor” to open the editor. You will see a graph, whose node is the institution itself.

Below the institutions, you can see the departments. By clicking one of them, action buttons will appear below it. You can edit, add sub-department as a child of the selected department, or delete. To delete an item, make sure it has no children first, otherwise the operation will fail.

You can perform the same actions on sub-departments and units, except for adding children to units because units cannot have children.

7. Positions

Before adding employees, you must first register necessary positions for them.

Click “Positions” in the sidebar to open the position list page. Just like other pages, you can see the list of positions and filter them.

The screenshot shows the 'Positions' page. The sidebar is identical to the previous screenshot, but 'Positions' is now highlighted. The main content area has a title 'Positions' and a search bar with fields for 'Name', 'Position Code', and 'Grade', followed by a search icon and a '+ Add' button. Below the search bar is a table with the following data:

Name	Position Code	Grade	
POS1	POS1	G12	>

At the bottom right of the table, it says '1 Results' followed by navigation arrows and a box containing the number '1'.

By pressing “Add” on the top right, you can open the position registration page.

* Status		* Affiliation	
Degree		* Position	
Raise Count		Last Raise Date	Select date

Email		Phone Number	
Country		State	
City		Line 1	
Line 2		Postal Code	

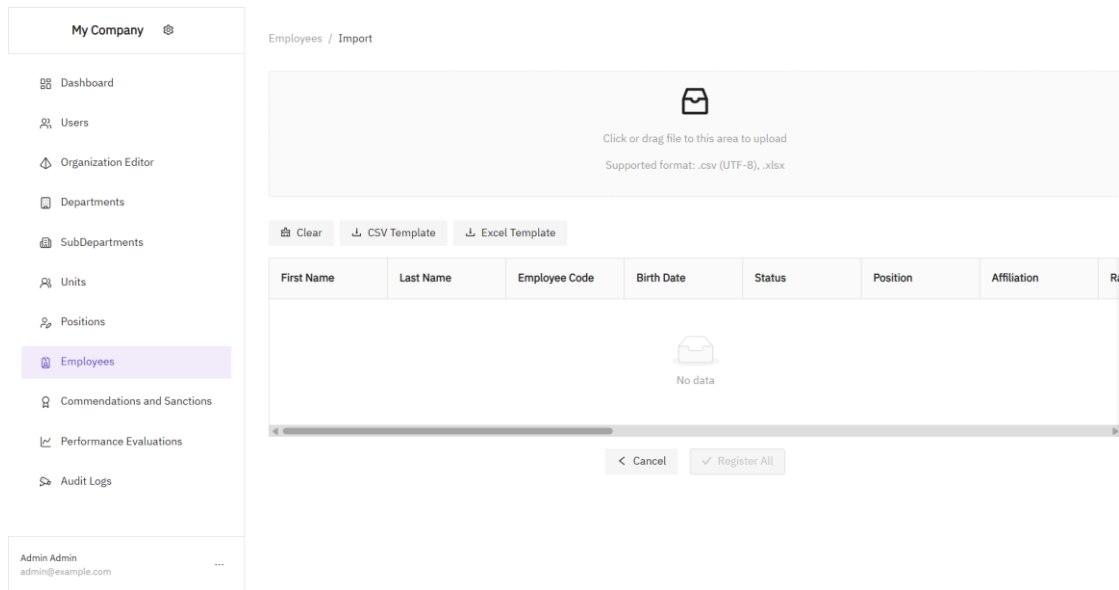

The other way is to import data from CSV or Excel file.

Press “Import” next to the “Register” button. You will be navigated to the import employee page. On top of the page, we have a drag & drop area, to which you can move a file to import.

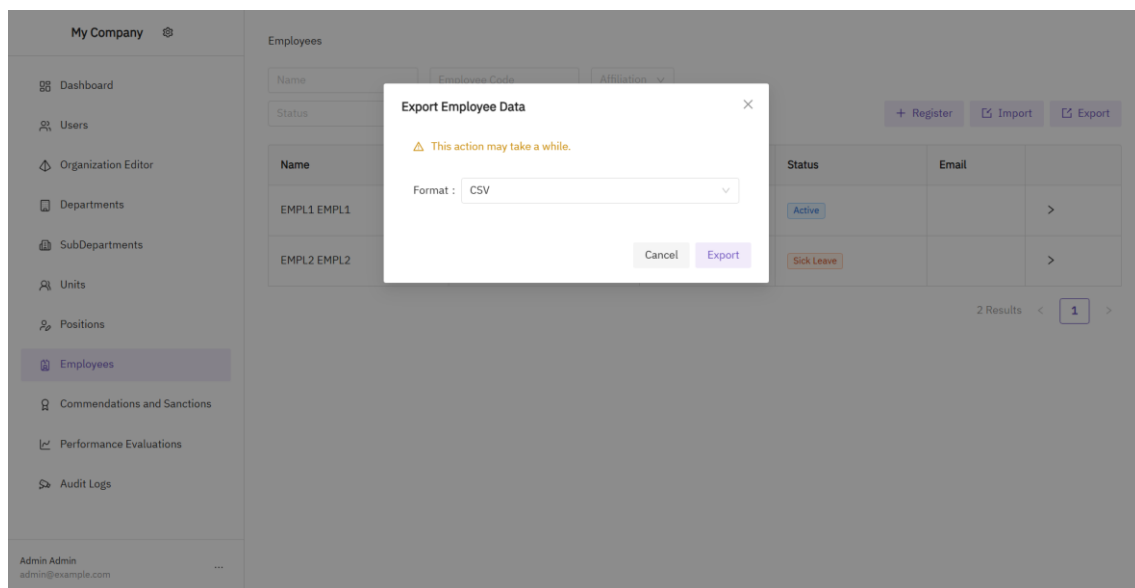

To import from CSV or Excel file, they must satisfy a certain format. For this purpose, we prepared a template file, which you can download by clicking the “CSV Template” or the “Excel Template” button. After downloading whichever format, you wish to use, edit the file and import it.

Once importing is complete, you can see the list of records imported in the list view below the buttons. The records shown here are only temporarily imported but not saved to the database yet. You can still import other files. To complete the registration process, click “Register All” below the table.

When you make a mistake (e.g. import the same file twice), then you can clear the temporarily imported records by clicking “Clear” button.

In the employee list page, we have “Export” button. By clicking it, you can open the export modal. By selecting the format you prefer (CSV or Excel), then pressing “Export”, you can export all employees registered in the system as a file.

9. Commendations and Sanctions

By clicking “Commendations and Sanctions” in the sidebar, you can open the list view for commendation and sanction letters. Just like other pages, you can filter the list, add new commendations by clicking “Issue” button, or open details by pressing “>” button.

Details page has two types of views: The “Details” view and the PDF view. You can switch between these views with the tab on top of the page.

10. Performance Evaluations

Performance evaluations management has the same structure as commendations and sanctions management.

You can view the list, create new performance evaluation, open details in two different views. For more information, see **8. Commendations and Sanctions** chapter.

11. Audit Logs

Audit logs can be used to monitor system-wide activities and detect malicious actions.

Click “Audit Logs” to open the audit log list. This is a read-only page. Just like other list pages, you can filter the list.

Also, by clicking the “+” button on the left of each row, you can open the “Difference Viewer”. In this system, whenever an action is performed, related entity’s (e.g. departments, positions, employees) snapshot before and after the action is taken. In this difference viewer, you can see how the entity has changed by comparing the snapshot in JSON format.
